Design

Due to the Covid-19 pandemic, our store has seen a dramatic decrease in recent sales due to people being quarantined and overall not feeling safe to leave their homes. This website was created in response to that situation, and will hopefully attract more attention to our store. It allows customers to see what products we have low in stock and get delivered fresh groceries all in the comfort of their own homes. The website will also contain our weekly digital flyer, showcasing discounts on our products that will get more customers to shop with us.

State Diagram:

Jamboard Diagram:

Design Element Review:

The prototype of the website has features that all the stakeholders and users wanted, according to our jamboard notes. The prototype did not feature the sequence diagram yet, as implementing the customer service part was not the biggest concern as it was not necessary for a minimal usable program. Our component diagram was successfully followed as our prototype showcases all the parts in the diagram. Our prototype includes a customer account page, cancellation, checkout, show price and show quantity. While we didn't get to implement the purchase history, it will be completed in the near future.
